Art Unit: 1774

Claims 1-8 are rejected under 35 U.S.C. 103(a) as being unpatentable over applicants' statement of the prior art.

On pages 4 and 5 of their specification, applicants acknowledge that intermediate transfer recording media are known in the prior art. These known intermediate recording media comprise a substrate having a transferable portion composed of a receptor layer and a peelable layer. The experimental modification of this prior art in order to ascertain optimum operating conditions (.g., determine the peel strength of the transferable portion versus the non-peelable portion) fails to render applicants claims patentable in the absence of unexpected results. Since unexpected results are not self-evident in applicants' specification examples, it is suggested that applicants discuss the pertinence of their examples in their response to this action.
